TNB alarmed by rise in high-voltage tripping cases

KUALA LUMPUR: The increase in high voltage tripping cases following construction work near the line reserve area is worrying Tenaga Nasional Berhad (TNB) when the number of cases jumped seven times in the first 10 months of this year. TNB chief grid officer Datuk Husaini Husin said tripping cases due to construction work by developers in the TNB right-of-way areas jumped to eight cases until October compared with the previous year, which recorded only one case. "We are worried if more developers disregard our advice to stay away from TNB's transmission lines, this year's tripping cases may increase to double digits as reported in 2018 with 18 cases," he said yesterday. He said these cases could cause injuries, loss of life, and disrupt the stability and security of the national grid system supplying electricity to nearly 9.5 million in the peninsula. **Bernama**
